SIXTH ANNUAL REPORT

OF THE

COMMISSIONER OF LABOR.

1890.

COST OF PRODUCTION: IRON, STEEL, COAL, ETC.

REVISED EDITION.

WASHINGTON:
GOVERNMENT PRINTING OFFICE.
1891.

THE EFFICIENCY OF LABOR.

THE EFFICIENCY OF LABOR.

The remaining portion of Part II is devoted to the subject of the efficiency of labor. The following statement shows the number of establishments represented in the tabulations:

NUMBER OF ESTABLISHMENTS TABULATED IN EFFICIENCY OF LABOR.

Industry and locality.	Establishments tabulated.
PIG IRON:	
Northern district of the United States	55
Southern district of the United States	21
Continent of Europe	5
Great Britain	3
Total	84
MUCK BAR IRON:	
United States	18
Continent of Europe	1
Great Britain	3
Total	22
STEEL INGOTS:	
United States	7
Continent of Europe	3
Great Britain	2
Total	12
STEEL RAILS:	
United States	2
Continent of Europe	5
Great Britain	1
Total	8
IRON ORE:	
United States	12
All industries	138

The titles of the tables and sub-tables relating to the efficiency of labor are as follows:

TABLE XV.—*The Efficiency of Labor, by Establishments.*

A.—Pig iron.

B.—Muck bar iron.

C.—Steel rails.

D.—Iron ore.

TABLE XVI.—*The Efficiency of Labor, by Occupations.*

A.—Pig iron.

B.—Muck bar iron.

C.—Steel rails.

D.—Iron ore.

TABLE XVII.—*Summary of the Efficiency of Labor, by Industries.*

TABLE XVIII.—*The Efficiency of Labor, by Industries (Additional Establishments).*

A.—Pig iron.

B.—Muck bar iron.

C.—Steel ingots.

D.—Steel rails.

Table XV, The Efficiency of Labor, by Establishments, is the basis of our work on the efficiency of labor. The term efficiency of labor is but another expression for the cost in labor consumption of producing a unit, like a ton of pig iron, that is, the time cost of production. In Part I cost of production was shown as consisting of the expenses of production, and the labor cost was the cost in wages paid labor. The tables in Part I also, especially the analytical tables connected with the text, disclosed, for the few establishments subject to complete analysis, the economic cost so far as the consumption or destruction of material itself is concerned; as, for instance, in the first analytical table, entitled "Cost of direct labor, etc., in one ton of pig iron," northern district of the United States (see page 77), it is seen that 5,810 pounds of iron ore, 4,528 pounds of limestone, and 6,797 pounds of bituminous coal were consumed—that is, destroyed as the materials named—in order to secure the production of one ton of pig iron, and that the consumption of labor for the production of such ton of pig iron amounted to $9.446. If we turn to Table XV, we shall find that in the first establishment given there, which happens to be establishment number 41 for pig iron, it cost 133,632 hours to produce 8,296 tons of pig metal. This means a production of .062 of a ton per hour, and a consequent consumption of time per ton, or an absolute destruction of labor, to the amount of 16.11 hours. This is in the northern district of of the United States. Table XVII, a summary of Table XV, shows the totals for such establishments as this element can be applied to. The range is some what great, but the conditions under which pig iron is produced will usually show as great a range. It should be remembered in this connection that the efficiency as shown by the time consumption necessary for the production of a ton of iron is affected by many conditions surrounding production, as already stated; for illustration, the relative capacity of a furnace may be noted. The efficiency in a works having a furnace of 100 tons capacity would be one thing in the consumption of time, as well as cost, and the efficiency of the same force employed in the same works, when the 100-ton furnace is turning out but 60 tons, would be quite another. So other conditions come in to create or account for the range of time consumption per ton, as shown in the table.

The desire of the Department (and to this end its best efforts have been put forth) was to secure like information for different parts of the United States, Great Britain, and the continent of Europe, that the efficiency of labor or the time cost of production might be brought into comparison for such localities. Only partial success, however, was attained.

It may be well to describe more particularly than the table itself would indicate the exact use of Table XV, and this explanation applies equally well to Tables XVI and XVII. In looking at sub-table A, Table XV, relating to pig iron, we find the occupations of the establishment number 41, the first establishment given in the table, the hours of work

done for each occupation, the average earnings per hour, the average product per hour in tons, the consequent labor cost per ton in money, and the consequent labor cost per ton in time. The only column in this table which needs particular explanation is that headed average product per hour. To understand this column it needs only to be said that the total product of the establishment is credited to each occupation; that is to say, there were two carpenters necessary for the proper administration of the work of establishment 41. The total product of the establishment for the period covered was 8,296 tons. The two carpenters employed, therefore, contributed their labor to the whole product, and the two carpenters, worked 2,000 hours; that is, 2,000 hours of carpenter work was necessary to enable the establishment to produce 8,296 tons of pig metal; therefore the average product for carpenters per hour is the quotient of the total number of tons produced, divided by 2,000, the total number of hours of work done by carpenters. This process applies to all other occupations, and is the proper method of ascertaining the part contributed by each occupation in securing the total product.

The imperfections and lack of uniformity in the terms used for occupations on the various payrolls of establishments have interfered somewhat with making Table XV as valuable in its details as, theoretically, it should be. For instance, if in every blast furnace all persons who performed any work as fillers were carried on the rolls under a uniform designation, we should learn from the fourth column of the table (average tons of product per hour for one man) the relative economy or waste in that branch of labor in the different establishments, an important and interesting piece of knowledge; but one payroll reports only fillers, another bottom fillers and top fillers, another coke fillers, ore fillers, and top fillers, while, with regard to any of them, there is some uncertainty whether this labor may not have been contributed to by persons carried on the rolls under a term wholly unsuggestive of such work. An attempt has been made to limit the effect of this imperfectness and lack of uniformity in terms by grouping together occupations alike or closely allied in nature, and showing the results simply for these groups. And however lacking the data may have been for the full accomplishment of what was desired, it is believed that a comparison of the details as set forth in the tables will prove highly instructive, especially to those engaged in the active work of production. Of course, what is here said as to the effect of these limitations applies to the single occupations and groups of occupations—to the details, in other words—for the results for each establishment as a whole must be accepted as exact and strictly comparable with every other, since they cover all employés concerned in production, the actual earnings paid them, the quantity of product, and the hours of work performed to produce that product.

It has been possible to deal in the complete way desirable, as exhib-

ited in Tables XV, XVI, and XVII, with but a small number of all the establishments for which cost of production and wages are shown. This is because in the others one or another of the conditions necessary was lacking. The most frequent difficulty was the impossibility of finding out the time of the piece workers—the hours per day and the days of work done of those who are hired and paid by the quantity of work turned out and not by the day, week, or month. This point is more particularly adverted to in the remarks preliminary to Tables XII to XIV, relating to the time and earnings of employés. While, on the plan attempted, the office was thus limited as to the number of establishments it could include, with absolute, positive data for a basis, many others were found which, by admitting some small amount of supposition or estimate, became susceptible of treatment. These are presented by themselves in Table XVIII. Only the average earnings and product per man per hour are shown in Table XVIII for reasons which will be apparent from what follows. Keeping in mind what has just been said as to the absolute completeness of the data for determining efficiency for establishments as a whole in Tables XV and XVII, the relative adequacy of the basis used in Table XVIII can be determined from the following statement:

The points furnished were these—

1. A statement by the establishment of the daily hours of labor in each occupation.

2. A statement by the establishment of the average number of workmen in each occupation through the period.

3. A statement by the establishment of the rate of pay (when all work at one rate), or the average rate of pay (when they work at different rates) of those paid by the hour, day, or week in each occupation through the period.

4. A statement by the establishment of the average earnings per week on full time of those paid by the quantity (piece workers).

In addition, of course, there were the total tons of product and total wages paid during the period, absolute figures from the books of firms, which had been used in determining the labor cost in one ton.

Of the statements noted above it may be said that data relating to them were carefully prepared by the agents of the Department during consultation with the officials of the various establishments, but, necessarily, some of the figures depend in considerable measure upon the judgment of these officials. The statement for number 1 may be considered as practically exact, and nearly as much may be said of those for number 3. Of numbers 2 and 4 it may be said that in cases where a copy of the payroll was secured and a tabulation made from it by which these could be tested, considerable variation was occasionally found as to the total amount of wages for the whole period derivable from the data, though but very little as to daily rates, showing that the number of men was inexact; perhaps because a correct allow-

ance had not been made for the effect of partial or complete shut-downs on the number persistently necessary. It is much more difficult than it seems for a manufacturer to tell how many workmen of each occupation and grade of occupation he keeps steadily at work for a year, and his opinion may differ quite a little from the results of a mathematical test as to their average earnings per week for a long period, though they be quite correct for a week.

The process of handling these data to determine efficiency was as follows: The wages of the entire force for a single week was first computed, and was then divided by the number of hours of work done, giving the average wages per workman per hour; this was then divided by the labor cost per ton as previously worked out for the tables on cost of production, the quotient, of course, being the desired result—average tons of product per man per hour. If the average rate of wages per workman per hour as derived above be correct, the final result sought must be correct, and this average rate will be correct if such rates as are reported exist, and if the proportion between the workmen at the different rates be maintained, whether the number in each occupation be true or not. Now it would seem impossible that there should be any serious error in this proportion; for whether, as an illustration, there be 25 fillers and 5 cindermen, or 26 fillers and 4 cindermen in a blast furnace, is of too little moment to injure the average rate per man per hour for the whole establishment. It must be presumed that this proportion at least approximates closely to the truth. It may be held, therefore, that the results shown in Table XVIII are substantially true and comparable with themselves and with those of Table XVII. Their strong agreement with the latter, which are based on absolutely full data, is additional corroboration.

An examination of these efficiency tables discloses much interesting variation, only a little of which can be noted. Passing by the first of these and taking Table XVI, in which occupations are brought together, we notice constantly the high amount of product per man per hour in some cases and the very low product in others. The following condensation shows this range:

RANGE OF EFFICIENCY.

PIG IRON.

Work of—	Tons per man per hour.			
	Northern district of the United States.		Southern district of the United States.	
	From—	To—	From—	To—
Blacksmiths	4.882	10.294	3.087	5.317

Miners	.051	.663
Timbermen	2.602	139.775
Other labor	.103	2.345

By reference to the average earnings it is seen that, so far as individual occupations are concerned, this wide range of efficiency cannot in any apparent degree be attributed to high or low wages. To whatever extent a low wage carries with it an accentuated low efficiency, it is manifest that it is here interfered with by some more potent factor. Without doubt that factor is the small amount of labor of one particular kind with which one establishment is run as compared with another. This may be especially the case in occupations in which the labor is of a general nature rather than special to the industry. For instance, if we compare establishments 42 and 67 with reference to blacksmiths and carpenters, we see this illustrated. Each concern produces about the same number of tons, but the efficiency for each of these occupations in number 67 is about twice that in 42, while the rate of pay is higher in the latter. The explanation lies in the larger number of hours of work done in number 42, this establishment having 6,020 hours chargeable to blacksmiths and 4,960 to carpenters, while number 67 has 3,170 and 2,890 respectively. If these two establishments be followed through engineers, fillers, keepers, and other labor, the same relative economy in time in number 67 appears. So that we may conclude that relatively this establishment has discovered and is applying in each occupation the smallest amount of labor necessary to the end to be accomplished, while 42 is using labor wastefully. Presumably, the means and conveniences at hand for utilizing labor with little loss of power are correspondingly greater in 67, as it cannot be supposed that nearly twice as much is accomplished unless this is the case.

We come now to Tables XVII and XVIII, in which establishments as a whole are dealt with. It is likely, as a general feature, that in estab-

lishments where high wages are paid the appliances of production are of the best, and from this that high wages and high efficiency would usually go together. In the few occupations just considered we were not able to discover this, but considering the tables now before us it becomes quite apparent. The following condensed statements, drawn from both, facilitate the examination on this point:

COMPARISON OF EFFICIENCY OF LABOR.

[The true average earnings per man per hour for the several establishments combined into groups below, which would take note of the number of men in each establishment, does not seem to be what is required for the comparative purposes of this table, but rather the simple average arrived at by adding the averages shown in the main tables of those combined into a group and dividing by the number in the group. Therefore the latter is what is used, and no value must be ascribed to them beyond what is here indicated.]

The preceding tables also show quite clearly the variation in efficiency between different localities. In pig iron in the northern district of the United States forty-three of the fifty-five establishments have an efficiency of .08 of a ton or more, one ranging as high as .16 and under .17, thirty-four being concentrated in the four groups that begin with .08 and end under .12; while in the southern district of the United States fourteen of the twenty-one have an efficiency under .08, and of the seven above this figure five are under .10. In the northern district for those of .08 and above, the average earnings per man per hour ranges from 14.1 cents to 18.7, increasing quite generally with the increase of efficiency, while those below .08 have earnings from 11.1 cents to 12.8. In the southern district the tendency of efficiency and earnings to move together is not so marked, though the two most efficient have earnings above the average. In Great Britain three establishments are given, two of which have a high efficiency, both being between .12 and .14 tons and accompanied by earnings of 9 and 10 cents, while the remaining one, with an efficiency between .07 and .08 tons, has earnings of but 5.8 cents. The five establishments for the continent of Europe have an efficiency rather lower than the northern district of the United States, agreeing, perhaps, more nearly with the southern. No connection between efficiency and earnings is traceable in them. In muck bar iron the United States, Great Britain, and the continent of Europe are about on a par as to efficiency, though the number of establishments from the foreign countries is too few for an emphatic conclusion. The connection with earnings is here readily apparent. In steel ingots five of the seven United States establishments have an efficiency between .10 and .13 tons, three being in the group of .12 and under .13, the same position as is occupied by one of the two for Great Britain and one of the three for the continent of Europe.

The remaining three for the foreign countries stand very low in the scale, being under .07 tons, a position occupied by only one of the seven United States establishments. High earnings are here also generally found with high efficiency. For steel rails the United States is represented by two concerns, the continent of Europe by five, and Great Britain by one. The difference in efficiency here is very marked. The two for the United States have an efficiency equal to between .12 and .13 tons of product per man per hour, and the five for the continent of Europe all fall under .06 tons, ranging down even to under .02 tons, while the single establishment for Great Britain shows an efficiency of between .08 and .09 of a ton. No connection between high productive power and high wages is apparent.

The tables giving details for the efficiency of labor, as already described, immediately follow:

TABLE XV.—THE EFFICIENCY OF LABOR, BY ESTABLISHMENTS.

[Table XV is the basis of the two that follow. The tons of product are here apportioned successively to the work in the several classes of occupations. The results for one occupation are not comparable with those for another but only with the results for the same occupation in another establishment. Table XVI groups like occupations to facilitate such comparison. The results for establishments as a whole are comparable with each other, and for convenience of comparison are brought together in Table XVII. In Table XVIII results for some additional establishments are shown. The establishment numbers refer to the cost of production presentation, Tables I to XI.]

A.—PIG IRON.

PART III.

COST OF LIVING.

COST OF LIVING.

An essential element in the cost of production and in the efficiency of the labor employed is the cost of living. In connection, therefore, with the facts gathered by the agents of the Department relating to the cost of production, earnings, and efficiency of labor, there has been collected a vast amount of information pertaining to the cost of living of the men engaged, and Part III is devoted entirely to that subject. The facts were gathered from the heads of families employed in the very establishments from which schedules relating to cost of production and pay accounts were obtained, and upon budgets uniform for all industries. These budgets comprehended the constitution of the family; whether they owned the house in which they lived, or whether the house was hired, or furnished by the employer; the cost of living, in itemized statements, and wherever possible with quantity as well, with figures as to the yearly income of the individual members of the family from all sources, and the total cost of living in comparison with the total income, thus showing whether a surplus had arisen from a year's work or whether a deficit had occurred. This range of facts was gathered from 3,260 families distributed as to states and industries as follows:

The titles of the general tables and sub-tables relating to cost of living will now be given; the tables themselves will be found further along at the close of the text. Another series of tables, under the subject of consumption of food, based on these general tables, is embodied in the text, the titles of which will be enumerated by them-

selves in the proper place. The titles of the general tables and sub-tables are as follows:

TABLE XIX.—*Pig Iron: Cost of Living, by Families.*

A.—Description of the family.
B.—Age and sex.
C.—Sources of income.
D.—Expenditure for food.
E.—Expenditure other than for food.
F.—Contrasted income and expenditure.
G.—Remarks.

TABLE XIX.—*Bar Iron: Cost of Living, by Families.*

A.—Description of the family.
B.—Age and sex.
C.—Sources of income.
D.—Expenditure for food.
E.—Expenditure other than for food.
F.—Contrasted income and expenditure.
G.—Remarks.

TABLE XIX.—*Steel: Cost of Living, by Families.*

A.—Description of the family.
B.—Age and sex.
C.—Sources of income.
D.—Expenditure for food.
E.—Expenditure other than for food.
F.—Contrasted income and expenditure.
G.—Remarks.

TABLE XIX.—*Bituminous Coal: Cost of Living, by Families.*

A.—Description of the family.
B.—Age and sex.
C.—Sources of income.
D.—Expenditure for food.
E.—Expenditure other than for food.
F.—Contrasted income and expenditure.
G.—Remarks.

TABLE XIX.—*Coke: Cost of Living, by Families.*

A.—Description of the family
B.—Age and sex.
C.—Sources of income.
D.—Expenditure for food.
E.—Expenditure other than for food.
F.—Contrasted income and expenditure.
G.—Remarks.

TABLE XIX.—*Iron ore: Cost of Living, by Families*

A.—Description of the family
B.—Age and sex.
C.—Sources of income.

D.—Expenditure for food.
E.—Expenditure other than for food.
F.—Contrasted income and expenditure.
G.—Remarks.

TABLE XX.—*Pig Iron: Summary of Cost of Living for each State, by Nationalities.*

A.—Summary of condition as to children.
B.—Summary of sources of income.
C.—Summary of expenditure for rent.
D.—Summary of expenditure for food.
E.—Summary of expenditure other than for rent and food.
F.—Summary of contrasted family income and expenditure.
G.—Summary of contrasted individual income and expenditure.

TABLE XX.—*Bar Iron: Summary of Cost of Living for each State, by Nationalities.*

A.—Summary of condition as to children.
B.—Summary of sources of income.
C.—Summary of expenditure for rent.
D.—Summary of expenditure for food.
E.—Summary of expenditure other than for rent and food.
F.—Summary of contrasted family income and expenditure.
G.—Summary of contrasted individual income and expenditure.

TABLE XX.—*Steel: Summary of Cost of Living for each State, by Nationalities.*

A.—Summary of condition as to children.
B.—Summary of sources of income.
C.—Summary of expenditure for rent.
D.—Summary of expenditure for food.
E.—Summary of expenditure other than for rent and food.
F.—Summary of contrasted family income and expenditure.
G.—Summary of contrasted individual income and expenditure.

TABLE XX.—*Bituminous Coal: Summary of Cost of Living for each State, by Nationalities.*

A.—Summary of condition as to children.
B.—Summary of sources of income.
C.—Summary of expenditure for rent.
D.—Summary of expenditure for food.
E.—Summary of expenditure other than for rent and food.
F.—Summary of contrasted family income and expenditure.
G.—Summary of contrasted individual income and expenditure.

TABLE XX.—*Coke: Summary of Cost of Living for each State, by Nationalities.*

A.—Summary of condition as to children.
B.—Summary of sources of income.
C.—Summary of expenditure for rent.
D.—Summary of expenditure for food.
E.—Summary of expenditure other than for rent and food.
F.—Summary of contrasted family income and expenditure.
G.—Summary of contrasted individual income and expenditure.

TABLE XX.—*Iron Ore: Summary of Cost of Living for each State, by Nationalities.*

A.—Summary of condition as to children.
B.—Summary of sources of income.
C.—Summary of expenditure for rent.
D.—Summary of expenditure for food.
E.—Summary of expenditure other than for rent and food.
F.—Summary of contrasted family income and expenditure.
G.—Summary of contrasted individual income and expenditure.

TABLE XXI.—*Pig Iron: Recapitulation of Cost of Living, by States*

A.—Recapitulation of condition as to children.
B.—Recapitulation of sources of income.
C.—Recapitulation of expenditure for rent.
D.—Recapitulation of expenditure for food.
E.—Recapitulation of expenditure other than for rent and food.
F.—Recapitulation of contrasted family income and expenditure.
G.—Recapitulation of contrasted individual income and expenditure.
H.—Recapitulation of means of support.

TABLE XXI.—*Bar Iron: Recapitulation of Cost of Living, by States*

A.—Recapitulation of condition as to children.
B.—Recapitulation of sources of income.
C.—Recapitulation of expenditure for rent.
D.—Recapitulation of expenditure for food.
E.—Recapitulation of expenditure other than for rent and food.
F.—Recapitulation of contrasted family income and expenditure.
G.—Recapitulation of contrasted individual income and expenditure.
H.—Recapitulation of means of support.

TABLE XXI.—*Steel: Recapitulation of Cost of Living, by States.*

A.—Recapitulation of condition as to children.
B.—Recapitulation of sources of income.
C.—Recapitulation of expenditure for rent.
D.—Recapitulation of expenditure for food.
E.—Recapitulation of expenditure other than for rent and food.
F.—Recapitulation of contrasted family income and expenditure.
G.—Recapitulation of contrasted individual income and expenditure.
H.—Recapitulation of means of support.

TABLE XXI.—*Bituminous Coal: Recapitulation of Cost of Living, by States.*

A.—Recapitulation of condition as to children.
B.—Recapitulation of sources of income.
C.—Recapitulation of expenditure for rent.
D.—Recapitulation of expenditure for food.
E.—Recapitulation of expenditure other than for rent and food.
F.—Recapitulation of contrasted family income and expenditure.
G.—Recapitulation of contrasted individual income and expenditure.
H.—Recapitulation of means of support.

TABLE XXI.—*Coke: Recapitulation of Cost of Living, by States.*

A.—Recapitulation of condition as to children.
B.—Recapitulation of sources of income.
C.—Recapitulation of expenditure for rent.

D.—Recapitulation of expenditure for food.
E.—Recapitulation of expenditure other than for rent and food.
F.—Recapitulation of contrasted family income and expenditure.
G.—Recapitulation of contrasted individual income and expenditure.
H.—Recapitulation of means of support.

TABLE XXI.—*Iron Ore: Recapitulation of Cost of Living, by States.*

A.—Recapitulation of condition as to children.
B.—Recapitulation of sources of income.
C.—Recapitulation of expenditure of rent.
D.—Recapitulation of expenditure for food.
E.—Recapitulation of expenditure other than for rent and food.
F.—Recapitulation of contrasted family income and expenditure.
G.—Recapitulation of contrasted individual income and expenditure.
H.—Recapitulation of means of support.

TABLE XXII.—*Pig Iron: Summary of Cost of Living for all States combined, by Nationalities.*

A.—Summary of condition as to children.
B.—Summary of sources of income.
C.—Summary of expenditure for rent.
D.—Summary of expenditure for food.
E.—Summary of expenditure other than for rent and food.
F.—Summary of contrasted family income and expenditure.
G.—Summary of contrasted individual income and expenditure.
H.—Summary of means of support.

TABLE XXII.—*Bar Iron: Summary of Cost of Living for all States combined, by Nationalities.*

A.—Summary of condition as to children.
B.—Summary of sources of income.
C.—Summary of expenditure for rent.
D.—Summary of expenditure for food.
E.—Summary of expenditure other than for rent and food.
F.—Summary of contrasted family income and expenditure.
G.—Summary of contrasted individual income and expenditure.
H.—Summary of means of support.

TABLE XXII.—*Steel: Summary of Cost of Living for all States combined, by Nationalities.*

A.—Summary of condition as to children.
B.—Summary of sources of income.
C.—Summary of expenditure for rent.
D.—Summary of expenditure for food.
E.—Summary of expenditure other than for rent and food.
F.—Summary of contrasted family income and expenditure.
G.—Summary of contrasted individual income and expenditure.
H.—Summary of means of support.

TABLE XXII.—*Bituminous Coal: Summary of Cost of Living for all States combined, by Nationalities.*

A.—Summary of condition as to children.
B.—Summary of sources of income.
C.—Summary of expenditure for rent.
D.—Summary of expenditure for food.

E.—Summary of expenditure other than for rent and food.
F.—Summary of contrasted family income and expenditure.
G.—Summary of contrasted individual income and expenditure.
H.—Summary of means of support.

TABLE XXII.—*Coke: Summary of Cost of Living for all States combined, by Nationalities.*

A.—Summary of condition as to children.
B.—Summary of sources of income.
C.—Summary of expenditure for rent.
D.—Summary of expenditure for food.
E.—Summary of expenditure other than for rent and food.
F.—Summary of contrasted family income and expenditure.
G.—Summary of contrasted individual income and expenditure.
H.—Summary of means of support.

TABLE XXII.—*Iron Ore: Summary of Cost of Living for all States combined, by Nationalities.*

A.—Summary of condition as to children.
B.—Summary of sources of income.
C.—Summary of expenditure for rent.
D.—Summary of expenditure for food.
E.—Summary of expenditure other than for rent and food.
F.—Summary of contrasted family income and expenditure.
G.—Summary of contrasted individual income and expenditure.
H.—Summary of means of support.

TABLE XXIII.—*Recapitulation of Cost of Living, by Industries.*

A.—Recapitulation of condition as to children.
B.—Recapitulation of sources of income.
C.—Recapitulation of expenditure for rent.
D.—Recapitulation of expenditure for food.
E.—Recapitulation of expenditure other than for rent and food.
F.—Recapitulation of contrasted family income and expenditure.
G.—Recapitulation of contrasted individual income and expenditure.
H.—Recapitulation of means of support.

TABLE XXIV.—*Summary of Cost of Living for all Industries combined, by Nationalities.*

A.—Summary of condition as to children.
B.—Summary of sources of income.
C.—Summary of expenditure for rent.
D.—Summary of expenditure for food.
E.—Summary of expenditure other than for rent and food.
F.—Summary of contrasted family income and expenditure.
G.—Summary of contrasted individual income and expenditure.
H.—Summary of means of support.

The Department has aimed to secure accounts from a representative number of the employés of the establishments covered in Parts I and II, and also from those families whose surroundings and conditions made them representative of the whole body of employés in any particular establishment. This representative character, however, has been impaired in some measure by two features: first, some families have not been willing to give the information desired; while, second,

other families, perfectly willing, have not been able to give reasonably exact accounts of their living expenses.

The 3,260 families from whom accounts for a year's living have been obtained represent 16,581 individuals. The facts for this great number of families are shown in detail in Table XIX; each family is given one line through the sub-tables A to G. The workers in pig iron establishments being first taken up, and those of the other industries following in order. Tables XX to XXIV summarize and crystallize the detailed facts of Table XIX and bring together in summaries and recapitulations the different results obtained.

Each family is given a number, known as the budget number, by which it may be traced through the several sub-tables; thus budget number 300, in sub-table A, Table XIX, Pig iron, refers to a distinct family, and budget number 300, sub-tables B, C, D, E, F, and G, of Table XIX, Pig iron, relates to the same family. These budget numbers, it must be remembered, have no relation whatever to establishment numbers used in Parts I and II. The establishment numbers to which the budgets relate are omitted, as their presence would enable anyone to see in what state such establishments tabulated in Part I are located, and lead possibly to an identification of some of them.

By the word family, as used in the three great tables of this part, is meant the family as a totality—the husband, wife, children, boarders, everybody that goes to make up the household for which facts were given.

Table XIX so specifically exhibits the details of the cost of living for each family for which accounts have been secured that no analysis would add practically to its value. Many features, however, when the table is studied will strike the reader as peculiar, but a little reflection will show the legitimacy of such features. The absence of milk, butter, eggs, or hog products from the dietaries of many families, as tabulated in Table XIX, may sometimes be explained by the fact that such families owned hens or cows, or kept pigs or hogs, and so furnished themselves with these products without purchasing in the market. The same condition applies in many cases which show an absence of vegetable products from the expense of families, or perhaps, if not an absence of such products, a very small quantity used. In such cases gardens were often cultivated by the families and the products consumed without apparent outlay, certainly no outlay in cash, for purchases.

In sub-table E, Table XIX, Expenditure other than for food, it will be noticed that in many cases a very small amount is expended for fuel. This feature is often explainable by the fact that such families, as they have stated, "pick up" wood or coal. Sometimes the expenditure for fuel is omitted entirely, and in such cases if not picked up it may be furnished by the lessor of the house to the lessee without extra charge, and be included in the price paid for rent. Such exceptions, of course,

must occur in mining districts where coal is of no particular consequence, and the lessor owns both house and coal. In some of the families the amounts expended for sickness and death are small. This may be owing to the fact that in sickness a company doctor, who receives a stipulated amount per annum from the corporation, has been employed.

In Parts I and II it will be noticed that great pains have been taken to explain every seeming discrepancy by footnotes, but such a course could not be followed with these budgets and keep the presentation within reasonable limits. It can only be said that without doubt an explanation might be found in about every case where there is apparent error; sub-table G, Remarks, will often throw light upon the matter.

Table XX is an exceedingly important one. It is a summary of cost of living by states and nationalities for each industry, drawn from the details of the preceding table. An examination of the first page of the table for pig iron may be of value. Sub-table A, summary of condition as to children shows that of the Alabama families employed in the pig iron industry, 132 husbands are born in the United States—we do not know their nationality other than by birth—1 is a Canadian, 3 are English, 3 German, 2 Irish, 1 Scotch, and 1 Welsh; that in 47 of these the condition as to children is unknown, 45 of the latter number being American families; that the average number of children per family for the American families is 2.8, for the Canadian 4.0, for the English 4.5, for the German 3.5, for the Irish 1.5, and for the Welsh 3.0; and that 48 families are without children, 45 of them being American families. The table also subdivides the children into those at work, those at school, and those at home.

Table XXI recapitulates the state totals found in Table XX so that comparisons between states may be easily made. By sub-table B we see that in Alabama the 143 families engaged in pig iron production average in size 4.3, and that they have an average income of $549.74, or an average individual income of $127.41; in Georgia the families average 5.6, with an average income of $499.05, or an average for each individual in each family of $88.48; in Illinois the income rises to $723.69 per family, or $168.30 per individual; in New York it is $556.99 per family, or $101.27 per individual; in Ohio, the income per family is $586.39; in Pennsylvania, $625.59; in Tennessee, $546.61; in Virginia, $150.29, and in West Virginia, $696.67; while for the total of 762 families in the states just named, the average income of the husbands alone is $513.52, but of the family, on the average, $591.61, or per individual in each family, $117.43. For Belgium the income per family is, on the average, $374.53, while in Great Britain it is $456.86.

Looking at sub-table C we find that out of 762 families employed in the production of pig iron in the United States, the average size of family is 5.0, and 189 families out of the whole number own their houses. 533 families report the number of rooms they occupy, and this shows for the number given 3.9 rooms, nearly 4 rooms for each family. The

average rent paid by the whole is $65.02 per annum, or an average of $13.34 for each individual in the families. The influence of climate is seen by the statistics in sub-table C. There is not a great range in difference of rent of the pig iron producing families in the different states considered; that is, in no one case does it vary greatly from the average for the whole, $65.02, the widest variation being in Illinois, where the average rent per family is $87.94. In Belgium the rent is $31.72; in Great Britain, $39.47, or an average for the two countries of $38.35, as against $65.02 for the families in the United States.

Through sub-table D of Table XXI can be traced the comparisons for the expenditures for the different kinds of food used.

The next most interesting recapitulation is that designated as sub-table E, for pig iron. The influence of climate is observable to some extent in the examination of the fuel expense. In Alabama it is $16.79 per family; in Georgia, $8.72; in Tennessee, $19.08; while in the states reaching farther north the sum is considerably increased, as, for instance, in Illinois it is $41.30; in New York, $35.85; in Ohio, $31.33; in Pennsylvania, $29.94, and for all the states, for the number of families considered, 762 in all, the average expense for fuel is $27.26; while in Belgium, for the families involved, the expenditure for fuel per annum is $16.74, and in Great Britain, $20.76. We find the average expenditure of 762 families for taxes to be $5.59, the highest amount paid being $12.28 in Ohio, and the lowest amount in Georgia, $1.46, while in Belgium the taxes are 56 cents on the average for the 11 families given, and $1.77 in Great Britain. Life insurance seems to form a considerable portion of the expenses of families, it being, for the 762 families engaged in the production of pig iron for the United States, $18.13 on the average. In Great Britain it is $12.21. The average expense for labor organizations in the United States is $7.26; in Belgium, $3.67, and in Great Britain, $3.72; while for religion, the annual average expense in the United States is $7.76; in Belgium, $1.24, and in Great Britain, $5. The literary habits of these families are well testified to by the expense for books and newspapers, it being for the United States, $5.70, the largest sum being for Illinois, $8.37, and the smallest for Georgia, $1.93. In Belgium it is $2.51, and in Great Britain $5.10. For amusements and vacation the average United States family employed in the production of pig iron expends $11.28; in Belgium, $38.54, and in Great Britain, $19.05. There are some unhappy revelations of the amount of money that goes for intoxicating liquors. The Alabama families expend for drink on the average per annum, $17.15; Georgia, $8.05; Illinois, $61.73; New York, $35.14; Ohio, $14.13; Pennsylvania, $13.90; Tennessee, $9.18, and Virginia, $8.08; while for Belgium the annual average expense for intoxicating liquors for 11 families given is $9.66, and for Great Britain, $21.86. For tobacco the annual average expense ranges from $5.44 in New York to $15.46

in Georgia, the average for all the states considered being $11.46; while for Belgium it is $5.54, and for Great Britain, $16.38.

Sub-table F, Table XXI, for the families engaged in pig iron production, shows the contrasted income and expenditure per family. These figures need not be reproduced, for reference to the table will bring the comparisons clearly to view. It may be said, however, that out of the 762 families engaged in the pig iron industry in the United States, 511 had an average surplus of $99.23 for their year's work, and 249 had a deficit of $64.75 on the average. In Belgium 6 out of the 11 families engaged in the production of pig iron had a surplus of $22.24 on the average, while 5 had a deficit of $22.24, and in Great Britain 30 families out of 65 in the pig iron industry had an average surplus of $47.02, while 2 experienced a deficit of $4.97.

In sub-table G, Table XXI, the individual income and expenditure are brought out, and in sub-table H the means of support. So the reader can go through with all of Table XXI with each of the several industries, finding all the facts presented.

Table XXII summarizes by nationalities, in two groups, one representing the United States and the other Europe, the facts shown in Table XX for individual states.

Sub-table B shows sources of income, and looking at the exhibit of these sources for pig iron we see that the Canadians seem to lead as to the average income of the family, it being $884.15, while the lowest average income per family is for the Austrians, being $379. These are for Canadians and Austrians employed in this country. The range in the individual income is from $162.66 for the Welsh families, down to $[illegible] for the Hungarian. The range for different nationalities employed in Europe is as follows, the highest being for the Scotch, $517.01 per family, and the lowest for the Belgian, $374.53, while the highest average individual income is in English families, being $102.69, and the lowest in Belgian families, $64.37.

Passing the other interesting features of Table XXII, and examining sub-table E for pig iron, we find a summary of expenditures other than for food and rent, which offers valuable comparisons. In the United States under the expenditure for intoxicating liquors, we find the highest to be for the Polish families, the average expenditure being $60 per annum, while the lowest is for the Scotch families, being $8 per annum. In Europe for the Belgian families employed in Belgium the average expense is $[illegible], the highest expense being for the Scotch families, $31.02.

Sub-table F gives a summary of contrasted income and expenditure, from which it is seen that the highest average income per family is for Canadians, $534.15, and the lowest for Austrian families, $379, these being employed in the United States; while the highest total expenditure also is by the Canadian families, $915.15, and the lowest by the Austrian families, $368.77. In Europe the Scotch families have the highest income, it being $517.01 on the average, the Belgian fam-

ilies having the lowest income, $374.53. The highest annual expenditure is among the Scotch families, $495.85, and the lowest among the Welsh, $371.50. These figures refer simply to families whose head is employed in the pig iron industry.

Table XXIII brings together the industry totals of Table XXI for the United States and Europe in separate groups to facilitate comparison. By this table we get the results for each industry taken as a whole for the United States and Europe. From it we learn, under sub-table A, the facts relative to the condition as to children, and under sub-table B those relative to sources of income. In the United States, out of 2,490 families, 762 are engaged in the pig iron industry, 623 in bar iron, 183 in steel, 508 in bituminous coal, 249 in coke, and 165 in iron ore, while for the 770 families investigated in Europe, 76 are engaged in the pig iron industry, 251 in bar iron, 201 in steel, 194 in bituminous coal, 29 in coke, and 19 in iron ore. Sub-table B also shows in how many families the wives, children, and boarders add to the income. The bar iron families have the largest average income in the United States, it being $784.11. The smallest income is for the iron ore families, it being $401.65. These proportions hold good even when the individual members of the family are considered, the highest average income for each individual being $161.86, in bar iron, and the lowest $77.51, in iron ore. Turning to Europe we find that the highest income is for the families engaged in the steel industry, where it is $530.10, and they also have the highest individual average, $101.57. These figures for the United States and Europe clearly show the changes in the methods of production. One would naturally have expected that in the United States the average income of families engaged in the steel industry would have been the largest, instead of those in bar iron or any other of the industries considered; but for several years the new processes introduced in the manufacture of steel in this country have enabled the producers to employ a lower grade of help, so that bar iron with its skilled workmen now leads the iron industries and those associated therewith in almost every table which we present. In Europe these processes have not been so thoroughly developed in the steel manufacture, and so a high grade of skill is still found there.

If we turn to sub-table C, of Table XXIII, we find that of the 2,490 families considered for the United States, 540 own the houses in which they live, while of the 770 families in Europe only 31 own houses. An interesting fact brought out in this tabulation is the number of rooms per family. Only 1,782 families in the United States report the number of rooms occupied, and the average is 4.1, the bar iron families representing the largest number, the average being 5.0. For Europe the average number of rooms per family is 3.7, the highest average being for pig iron, 4.0 rooms per family. Regarding rent, the bar iron families still lead in this country, the average expenditure being $107.33, the lowest average being for iron ore miners, $33.11 per family per annum. In

Europe the highest average is for bituminous coal miners, being $45.47, and the lowest average is for iron ore miners, $31.38. The average annual rent per family in the United States is $74.58, and in Europe $41.76, the average for the two countries being $65.50. Reducing the rent to averages per individual for the United States, we find that bar iron still leads, it being $22.54, the average for all families in the United States being $15.23. In Europe the average per individual is $7.91.

Sub-table D gives the expenditures for food of different kinds. By this table one can easily trace the food consumption, as far as cost is concerned, of the families engaged in the different industries considered. One single line illustrates the whole. Taking the United States, we find that the pig iron families for which the facts are given consume an average of $24.81 worth of beef; bar iron, $42.35; steel, $39.83; bituminous coal, $27.93; coke. $21.90, and iron ore, $27.87; the average for the United States for all industries being $30.57, while for Europe it is $29.47, being very nearly the same for the consumption of beef in the two countries. In the United States the bar iron families still lead in this respect. The average cost per family for all kinds of food is shown in the fourth section of sub-table D, where it is seen to be $243.65 in the United States, and $222.52 in Europe. The bar iron families for the United States have the highest average, it being $281.21, the iron ore families averaging $183.83.

Sub-table E is for expenditures other than for rent and food, and the figures for fuel, lighting, and clothing are given. The average cost of fuel for the various industries in the United States, as shown, is $25.55, and in Europe, $16.98, the bar iron families having the highest average, $32.30, so far as the United States is concerned. This is also true of lighting, for which the average expense of bar iron families is $6.57, the average for all industries being $4.57, while the average for all in Europe is $5.45, our own production of lighting material giving the advantage to a certain extent to the American worker.

The American workmen, so far as these tables are concerned, pays a higher average amount of money for taxes than his European competitor, as shown by section 2 of sub-table E. The highest average taxes are paid by the bar iron families, $13.29 per annum, the average for the United States being $6.44; while in Europe the steel workers pay the highest average amount for taxes, it being $6.66, and the average for all, $4.97.

The third part of sub-table E shows the expenses for religion, charity, books and newspapers, and amusements and vacation. Looking at amusements and vacation, we find that in the United States the average expenditure is $14.15 per annum, the bar iron families standing at the top with $22.37, and the iron ore miners, at the bottom of the list, with $10.25; in Europe the average for all is $20.53, the average for the steel workers being $25.83, while the iron ore miners spend for their families on an average but $3 per annum for amusements and vacation.

The fourth section of sub-table E gives the expenditures for intoxicating liquors, tobacco, sickness and death, and for other purposes. The average expenditure for intoxicating liquors for all the families giving information in the United States was $19.60, and in Europe, $23.17. For tobacco the expenditure was $10.98 in the United States and $9.47 in Europe. The averages by industries for liquors in the United States are as follows: for pig iron families, $17.61; bar iron families, $25.10; steel workers, $26.55; bituminous coal, $18.09; coke, $20.25; iron ore, $8.58; while in Europe the averages are, for pig iron, $20.00; bar iron, $25.26; steel, $26.19; bituminous coal, $21.76; coke, $20.85; iron ore, $7.53. It will be seen that iron ore miners, both for the United States and for Europe, show the lowest average expenditure for intoxicating liquors.

Sub-table F of Table XXIII gives the expenditure per family for rent, food, other purposes, and all purposes, the total income, and the balance per family of surplus or deficit. In the United States for all the industries considered, 1,580 families out of 2,490 report an average surplus of $137.87, the bar iron families taking the lead with an average surplus of $205.49, while 869 families report a deficit of $60.59 on an average per family, and in this the steel workers are ahead, the deficit being on an average $76.81 for 66 families. In Europe 441 families out of 770 report an average surplus of $69.52, and 167 families report an average deficit of $30.85.

Sub-table G shows averages for individual income and expenditure. For the 2,490 American families, 540 own houses, and the average rental for others is $15.23 per individual; for food, $48.60 per individual; for all purposes, $110.88, with an average individual income of $124.11; while for Europe, 31 families out of 770 own their houses, and the average expenditure for rent is $7.91 per individual, about half what it is in the United States. The average expenditure for food in Europe is $41.80 per individual, as against $48.60 in the United States. The total expenditure for all purposes per individual in Europe is $82.25, as against $110.88 in the United States, while the average income per individual for the European families is $88.47 on the average, as against $124.11 in the United States.

The last sub-table in Table XXIII is designated H, and shows how the family is supported; that is to say, by the earnings of what parts of the family, whether by the husband alone; husband, wife, and children; husband and other income, with their totals.

Table XXIV summarizes the facts for all industries combined, by nationalities in two groups, the United States being one and Europe the other.

THE CONSUMPTION OF FOOD BY NORMAL FAMILIES.

The following tables are believed to present a scientific basis of comparison of the quantity and value of food consumed by differently sized families; as far as the Department is aware this is the only effort in the direction indicated that has been made. In what has been said on the cost of living the family as it was found has been considered, and the comparisons in the preceding remarks have all been based on the family as found; that is, on the family simply, whether consisting of father and mother and one or more children, or with boarders and dependent relatives, and without regard to size. While such a comparison is exceedingly interesting and valuable, it is not particularly scientific, although the aggregates of cost under each specification as to articles or items is accurate, yet the comparison is by clusters of individuals and not by any clearly defined unit. In fact, it is difficult to compare the cost of living of one group with that of another, unless the groups are constituted exactly alike or nearly alike. One family may consist almost entirely of adult persons, and another of the father and mother and several young children. Economic writers, and notably Dr. Edward Atkinson, in making comparisons in the directions indicated, have considered two children, without regard to their ages, as equivalent to one adult in the consumption of food. The plan of the Department has been to reduce the comparisons relative to the consumption of food to an exact basis, and after much consideration and study of the question, a method on the basis of units of consumption was adopted, and while the basis is arbitrary, for the purposes of comparison it furnishes a method more satisfactory than any other yet suggested. The basis settled upon ascribes a consuming power to the husband equal to 100 units; to the wife, 90 units; to children from 11 to 14 years of age, inclusive, 90 units; to children from 7 to 10, inclusive, 75 units; to children from 4 to 6, inclusive, 40 units, and to children from 1 to 3, inclusive, 15 units. This basis enables one to make a comparison of the consumption of different kinds of food by purely mathematical methods, each family being reduced to its appropriate number of units; so that units are brought into comparison, and not the family as a group. For the purpose of this comparison, and to eliminate possibilities of mathematical error growing out of abnormal families, those with boarders or with a large number of children have been excluded and the remainder only, designated as normal families, made use of. All families having children over 14 years of age have been thrown out of the comparison, as well as all families where the number of children exceeded five. A study of the results obtained shows that under the restrictions noted, for large numbers of families, the theory, often made use of by writers, that two children are equal to one adult in consuming power is substantially correct. The budgets for this class of families have been selected from the 3,260 tabulated in Table XIX, and their budget numbers are retained so that anyone

can identify them in that table. The total number of families coming under this scientific and mathematical calculation is 1,613, distributed as to industry and locality as shown in Statements A and C.

STATEMENT A.—*Budgets used in Food Consumption Tables.*

[The budgets included in this statement were used in all the following tables from a to q, inclusive. They are all for families consisting of husband and wife and 3, 4, or 5 children under 15 years of age; families with a less or greater number of children, or with older children, or with boarders or dependents are excluded.]

State.	Pig iron.	Bar iron.	Steel.	Bituminous coal.	Coke.	Iron ore.	Total.
Alabama	25	7	1	15	6	....	54
Georgia	3	....	....	....	....	....	3
Illinois	4	5	5	....	....	....	14

The titles of the various tables under the general subject of consumption of food are as follows:

CONSUMPTION OF FOOD.

Table a.—Description of the family.
b.—Units of consumption per family.
c.—Quantity of certain articles of food used.
d.—Pig iron: cost, by families.
e.—Bar iron: cost, by families.
f.—Steel: cost, by families.
g.—Bituminous coal: cost, by families.
h.—Coke: cost, by families.
i.—Iron ore: cost, by families.
j.—Summary of quantity and cost of certain articles of food used.
k.—Pig iron: summary of quantity of food used, in certain selected occupations.
l.—Bar iron: summary of quantity of food used, in certain selected occupations.
m.—Steel: summary of quantity of food used, in certain selected occupations.
n.—Bituminous coal: summary of quantity of food used, in certain selected occupations.
o.—Coke: summary of quantity of food used, in certain selected occupations.
p.—Iron ore: summary of quantity of food used, in certain selected occupations.
q.—Miscellaneous: summary of quantity of food used, in certain selected occupations.
r.—Pig iron: decreasing cost per capita and increasing size of family.
s.—Bar iron: decreasing cost per capita and increasing size of family.
t.—Steel: decreasing cost per capita and increasing size of family.
u.—Bituminous coal: decreasing cost per capita and increasing size of family.
v.—Coke: decreasing cost per capita and increasing size of family.

w.—Iron ore: decreasing cost per capita and increasing size of family.
x.—Pig iron, bar iron, and steel, combined: decreasing cost per capita and increasing size of family.
y.—Coal, coke, and iron ore combined: decreasing cost per capita and increasing size of family.
z.—All industries combined: decreasing cost per capita and increasing size of family.

It was at first determined to use only the budgets for families consisting of husband, wife, and three, four, or five children in the treatment of consumption of food; but as the work developed, the advisability of also using the budgets of families having no children, one child, or two children in certain cases became apparent, and this has resulted in two classes of tables. To prevent any confusion of mind when examining them each has a prefatory note stating of what sized families it is composed. It will be noticed that the tables from **a** to **q**, inclusive, are made from budgets representing husband, wife, and three, four, or five children, while those from **r** to **z**, inclusive, are made from budgets representing husband and wife simply, or husband and wife and one, two, three, four, or five children. The first of the following statements (Statement B) shows the distribution by industries and states of these additional families of husband and wife simply, or husband and wife and one or two children; while the second (Statement C) shows the distribution of families of husband and wife simply, or husband and wife and one, two, three, four, or five children. This statement (C) is the basis for Tables **r** to **z** under the subject of consumption of food, and for Tables **1**, **2**, **3**, and **4** farther along under the subject of income and expenditure per family in normal families. Statement B is not used by itself as a basis for any tables; it simply shows the distribution of the other families that added to those in Statement A make those used in Statement C.

STATEMENT B.—*Budgets used in Food Consumption Tables.*

[The budgets included in this statement do not by themselves form the basis of any table. The statement simply shows the distribution of those other families consisting of husband and wife only, or of husband and wife and one or two children, that, added to those in Statement A, make those embraced in Statement C.]

State.	Pig iron.	Bar iron.	Steel.	Bituminous coal.	Coke.	Iron ore.	Total.
Alabama	65	12	1	25	14	....	117

Great Britain	26	46	39	37	6	....	154
Total	246	291	105	189	97	49	977

STATEMENT C.—*Budgets used in Food Consumption Tables.*

[The budgets included in this statement were used in tables r, s, t, u, v, w, x, y, and z following, and also in Tables 1, 2, 3, and 4 which appear a little further along under the caption Income and expenditure per family in normal families. They are for families consisting of husband and wife only, or husband and wife and one, two, three, four, or five children under 15 years of age; families with a greater number of children, or with older children, or with boarders or dependents are excluded.]

State.	Pig iron.	Bar iron.	Steel.	Bituminous coal.	Coke.	Iron ore.	Total.
Alabama	90	19	2	40	20		171

Tables a to i it will be seen on examination are detail tables; that is, the facts for each family stand by themselves, occupying always a single line. Table j to z and 1 to 4 (immediately following z) are summary tables in which many families are combined. In Tables a to i the budgets are tabulated always in the same order, the states being taken up alphabetically, and as three children are the smallest number considered here, families with such a number of children are presented first, and are followed in order by those of four and five children. The principle on which this study of the consumption of food is based being once understood, the tables will need little explanation. This principle may be again stated as based on the potential capacity for consuming food of the different members of families. It requires the ascription arbitrarily of a certain equal consuming power to all husbands, a different equal consuming power to all wives, and a consuming power to children equal for equal ages (or groups of ages) without respect to sex, but differing as between one age (or group of ages) and another.

The consuming power which has been given to the various members of families is shown in the following statement:

CONSUMING POWER ASCRIBED TO DIFFERENT MEMBERS OF FAMILIES.

Members of family.	Units of food consumption.
To husbands	100
To wives	90
To children from 11 to 14 years, inclusive	90
To children from 7 to 10 years, inclusive	75
To children from 4 to 6 years, inclusive	40
To children from 1 to 3 years, inclusive	15

Families with children over 14 years of age or with boarders or dependents have been excluded from consideration.

Table **a** gives a description of the families of three, four, and five children made use of. Table **b** shows the units of consuming power which each of these families has upon the basis just given. Table **c** shows the quantity of certain articles of food consumed for a hundred units of consuming power, that is, for one man. For instance, family number 9, the first one presented, consisting of husband, wife, and children of one, four, and six years, have a consuming power, by Table **b**, of 285 units, or in other words a consuming power equal to 2.85 men; now, by Table XIX.—Pig Iron, D.—Expenditure for Food (2), page 741, it will be seen that this family used 12 bushels of potatoes; this gives a consumption per 100 units of 4.21 bushels, as is shown in Table **c**.

Tables **d** to **i**, inclusive, take up for the different industries, from pig iron to iron ore, the whole cost of food and compute its cost per 100 units, the consuming power of a man. This same family (number 9) it will be found by Table XIX.—Pig Iron, D.—Expenditure for Food (3) page 753, made a total expenditure for food of all sorts of $231.15 which is equal to $81.11 per 100 units (or per man) as shown in Table **d**.

Table **j** summarizes the facts as to quantity and cost given in Tables **c** to **i**. Tables **k** to **q** summarize the facts as to quantity simply, given in Tables **c** to **i**, for certain selected occupations, the object being to determine the relative quantity consumed of certain articles of food by workmen in different occupations. This plan if applied to occupations more dissimilar in character might produce interesting results. The tables themselves, which will repay study, now follow:

CONSUMPTION OF FOOD.

TABLE a.—DESCRIPTION OF THE FAMILY.

[The families embraced in this table consist of husband and wife and 3, 4, or 5 children, the eldest of which is under 15.]

Budget number.	State.	Pertaining to the father.			Ages of children.
		Nationality.	Industry.	Occupation.	
9	Alabama	American	Pig iron	Carpenter	1, 4, 6

SUMMARY OF QUANTITY AND COST OF CERTAIN ARTICLES OF FOOD.

Table j, which follows, is a summary of facts drawn from the preceding tables. It brings into direct comparison the articles of food consumed per 100 units for all the families from each state named; a glance at it will bring out some exceedingly interesting comparisons; as, for instance, the consumption of potatoes in Alabama per 100 units for all the families involved, was 2.69 bushels, at a cost of $2.42, or an average price per unit of quantity (bushel) of 90 cents. In Illinois the consumption of potatoes was 6.66 bushels per 100 units, at a cost of $3.28 and an average price per bushel of 49 cents. Georgia shows 4.67 bushels to every 100 units of consumption, and a cost of $2.69 for the same, at an average price per bushel of 56 cents. Of sugar, an article more universally used than any other, perhaps—certainly more than potatoes, because many families use no potatoes at all—we find that in Alabama the consumption per 100 units is 66.77 pounds, at a cost of $6.44 and at an average price per pound of 10 cents. Georgia shows a consumption of 43.80 pounds, at a cost of $3.80 per 100 units, and at an average price per pound of 8⅔ cents. In Illinois the consumption of sugar is 77.99 pounds, at a cost of $6.21 per 100 units, with the average price of sugar at 8 cents per pound. Indiana shows for sugar a consumption of 43.85 pounds, at a cost of $3.65 per 100 units, and the price of sugar 8⅓ cents per pound. New York families consume 81.55 pounds of sugar, at a cost of $6.71 per 100 units, and the average cost of sugar is 8¼ cents per pound. Omitting other states of this country which show the same features, and turning to Europe, we find that in Belgium the consumption of sugar is 8.35 pounds, at a cost of $1.05 per 100 units, and the price of sugar is 12⅔ cents, and in France 11.76 pounds, at a cost of $1.81 per 100 units, with the price of sugar 15⅓ cents. Germany shows a consumption of 22.87 pounds, at a cost of $2.32 per 100 units, with the average of sugar 10 cents per pound, while in Great Britain the consumption is 47.61 pounds, at a cost of $2.14 per 100 units, with the average price of sugar at 4½ cents. It would be interesting and important to trace these comparisons through for butter, lard, meat, eggs, flour, coffee, and tea; but Table j itself, which is herewith given, offers the opportunity for all such comparisons:

CONSUMPTION OF FOOD—Continued.

DECREASING COST PER CAPITA AND INCREASING SIZE FAMILY.

Under this title are presented Tables r to z, which show the f indicated for each industry involved, commencing with pig iron. these tables, which exhibit the tendency to a decrease in the cos food per 100 units as the number of children increases, the downw tendency is nearly always present and is quite emphatically mar by the method of presentation: first, for families having no childre but one child; second, families having two or three children, resp ively, and third, families having four or five children. The table lows:

CONSUMPTION OF FOOD—Continued.

TABLE r.—PIG IRON: DECREASING COST PER CAPITA AND INCREASING SIZE OF FAMILY.

[No relation can be established between Table j, which includes only families with 3, 4, and 5 children, and relates only to certain specified articles of food, and this table, which is devised to illustrate the decreasing cost per capita for food as families increase in size, and therefore includes those with no children, with 1, and with 2 children, as well as those with 3, 4, and 5, and covers the expenditure for every sort of food.]

State and size of family.	Families.	Average units of consumption per family.	Average expense for food per 100 units of consumption.

INCOME AND EXPENDITURE PER FAMILY IN NORMAL FAMILIES

In this table, which is the last to be considered, an attempt has been made to bring into comparison for industries the average expenses and income per family of the normal families under treatment.

The titles of the tables and sub-tables under this topic are as follows:

TABLE 1.—*Income and Expenditure in Normal Families.*

A.—Pig iron.
B.—Bar iron.
C.—Steel.
D.—Bituminous coal.
E.—Coke.
F.—Iron ore.
G.—Pig iron, bar iron, and steel combined.
H.—Bituminous coal, coke, and iron ore combined.

TABLE 2.—*Recapitulation of Income and Expenditure in Normal Families, by States.*

A.—Pig iron.
B.—Bar iron.
C.—Steel.
D.—Bituminous coal.
E.—Coke.
F.—Iron ore.

TABLE 3.—*Recapitulation of Income and Expenditure in Normal Families, by Industries.*

TABLE 4.—*Recapitulation of Income and Expenditure in Normal Families, by Size of Family.*

TABLE 1.—INCOME AND EXPENDITURE IN NORMAL FAMILIES.

[Tables 1 to 4 exclude families having boarders, those with more than five children, and those with children over 14 years of age, and consider all others as normal.]

A.—PIG IRON.

State and size of family.	Families.	Average expense per family for—								Average income per family.
		Rent.	Fuel.	Lighting.	Clothing.	Sundries.	Total of preceding.	Food.	Total of all.

From the foregoing tables (1 to 4) we can take up either of the subjects involved and make comparisons for them for the different states and industries directly; as, for instance, looking at the matter of rent, we find that in Alabama the average expense per family of the normal families employed in the coke industry for rent is $47.08; in Pennsylvania, $65.41; in Tennessee, $30.33; in West Virginia, $34.50; in Great Britain, $32.76, and so on through the whole list, the last two columns, showing in contrast the total expenditure of the normal families considered and the average income per family. It seems to be a fair conclusion from an examination of the table on the contrasted expenditure and income of the normal family, that the size of the family has apparently no influence, or, at the highest, a very limited influence, on the amounts paid for rent, fuel, lighting, and sundries, while the amounts paid for clothing and food increase generally in a very steady manner in proportion to the size of the family. In all probability the extra expense for clothing and food, as the families increase in size, is covered by retrenchments in the amount paid for sundries. This latter assumption, however, cannot be thoroughly proved by a study of the "Sundries" column, but is only thrown out as a probable explanation and one resulting from meagre information of the appearance in the direction named.

In studying the tables which present summaries and recapitulations, that is, those beginning with j, the number of families must always be considered when determining the influence of the figures. Where the figures are more or less erratic in character they are from states from which but a limited number of budgets applicable to the normal family were received, or, if received, were not available for such a mathematical consideration of the cost of living.

MISCELLANEOUS NOTES.

These notes cover, in a brief way, various points relative to the conditions of life in many of the localities from which budgets were obtained. The cost of board for single persons, here given for many localities, is stated according to local usage, instead of being reduced to a single basis, as a week. Each paragraph presents the facts for an establishment.

PIG IRON.

ALABAMA.—The Department has budgets from six pig iron furnaces in this state and from four of them it has obtained further information as follows:

1. Most of the employés live in houses owned by the company. Three-fourths of the employés are colored, the white employés being mostly skilled laborers. While the white laborers all earn enough to be comfortable, yet their home conditions vary greatly, some being very clean and thrifty and others keeping their homes and families in a much dirtier and lower condition than the colored employés do. The houses and families of the colored employés are generally dirty and ill kept. Sani-

tary conditions of the houses are very bad. Indolence and resulting general filth and dirt about the homes of the people is the rule. Earnings of these people are sufficient to keep family well, but waste in buying, cooking, caretaking, etc., is such that shortly after pay day nothing is left. But little difference in rates between the "commissary" and city stores and remarkably few complaints. Coal and wood is picked up by all employés. They never buy except in extreme cases. Medical attendance is furnished at $1 per month for families, 75 cents per month for a single man. Single men can get board and lodgings at $4.50 per week, exclusive of washing, at the only boarding house. Washing generally amounts to $1.50 to $2 extra per month.

2. The majority of the employés are colored and single men. Employés are fairly housed and make few complaints.

3. The employés are also mostly colored and the majority of them are single men or men living apart from their families. These men usually club together, renting a house to sleep in, ten or twelve occupying one room, sleeping on the floor, etc. The houses owned by the company, where a portion of the employés live, are in a very bad condition, and are situated among the slag, drift, and refuse of the cinder yard. There is no drainage, no privies, and stench everywhere. Water has to be brought a distance or caught in barrels from the sooty roof. Employés complain of usury charged for borrowed money, 30 and 35 per cent. being paid. The waste of food and clothing is very great. The earnings of the employés are sufficient to make them comfortable and even to enable them to save, but the method of life of the colored ones is such that most of their earnings are wasted. The white employés have houses in the suburbs and are generally comfortable.

4. The facts relative to the employés are much the same as to color, unmarried condition, etc., as those described in paragraph 3 above. Employés are, however, paid every week, and in consequence can spend their earnings to much better advantage than when paid less frequently. Single men boarding pay $3 to $4 per week, sleeping two and three in a room. These employés are superior in health and deportment to many found in smaller establishments.

GEORGIA.—Budgets were obtained for but a single establishment in Georgia, for which further information was also obtained as follows:

The greater part of the employés are colored, the white employés being mostly skilled laborers. The houses are all owned by the company, many being in a bad condition and crowded. The employés are paid promptly in cash. There is a store owned by the company where the employés are charged the same rates as at other stores. The company employs two teachers for nine months of the year, and the children of the employés are taught without expense to their parents. The white children are taught separately from the colored. There is no boarding house belonging to the company, and the single men pay from $12 to $14 per month for very ordinary room and board. Water for drinking is scarce, as the smaller streams often dry up. Convict labor is employed at this place and causes much dissatisfaction among the free employés, who assert that it has the effect of driving away the best class of workmen.

NEW YORK.—Of three places for which budgets were obtained reports from two were furnished as follows:

1. There are no boarding houses for employés here, single men being taken in small numbers by private families at the rate of about $15 per month, exclusive of washing. The expense for clothing among furnace employés is large, as shoes are frequently scorched and overalls last but a short time.

2. The same general condition prevails here as described in paragraph 1 above. There are no boarding houses, and the prices for room and meals in private families range from $12 to $15 per month.

OHIO.—Budgets were obtained from five different furnaces, from four of which the following information was furnished:

1. Room and meals for single men can be obtained for an average cost of $16 per month. The houses are generally in poor repair, none of them being owned by the company.

2. The rates for board, etc., for single men are as follows:

Meals, lodging, and washing, per month	$15.00
Meals, per week	3.00
Meals and lodging, per week	3.50
Washing, per week	.50

At this place the employés are largely Germans, who frequently own their own homes and exhibit more prosperity than is usually found. There is also a large number of Italians employed here, the majority of whom are single. As many as 12 to 15 of these unmarried Italians live in one house of three or four rooms.

3. The prices paid by single employés for board are within the following limits.

Meals alone, per week	$3.00 to	$4.50
Meals and lodging, per month	18.00	20.00
Washing	.75	1.00

The furnace employés at this place are largely of foreign birth and very ignorant.

4. The average price paid by single men per month for meals and lodging is $18. The company owns no tenement houses.

PENNSYLVANIA.—Budgets were secured from employés at twelve pig iron furnaces in this state, and information of a general character was obtained for ten of that number as follows:

1. The employés are nearly all Hungarians, and the majority of those who are married have left their families in Europe. They are frugal in their habits, and usually keep on hand, for use in case of sickness or other emergency, at least $10 in cash, each. The balance of their surplus earnings is regularly sent to their families. The boarding houses are cooperative, companies of from 20 to 45 men being formed, who secure a suitable house and elect a "boarding boss" (usually a man whose wife is with him), whose duty it is to attend to the purchase of supplies, paying rent, and keeping accounts. At the end of every month each member of the company pays an equal share of the total expenses, and in addition $1.50 or $2 to the wife of the "boarding boss," who cooks the provisions and attends to the rooms. They also pay the boss 50 cents each per month if his entire time is taken up by the affairs of the company; but if he is himself a working man, earning wages, he becomes one of the company and pays his share of the total expenses. It is intended that the entire cost of board and lodging shall not exceed $9 per month per man, and if, at the end of a month, it is found to have gone beyond this amount, a meeting of the company is held and the bill of fare revised so as to reduce the cost. Each man furnishes his own bedding. The furniture is meagre, consisting mainly of home made tables and benches in lieu of chairs, while the bedsteads are generally improvised from old boards, the only really good article of furniture in the establishment being the cooking stove. The houses are crowded to their utmost capacity, the same rooms being occupied alternately by the men employed during the day and at night, and from 4 to 10 men sleeping in the same room together. Once a month, on pay day, a keg of beer is bought on the cooperative plan, if 20 men agree, for $3, which they drink between them. Less than 20 men will not buy together, the cost per man being considered too great. Each man usually has one fair suit of clothes besides his work clothes, the average expense per man for clothing being about $18 per year.

2. No regular boarding houses for employés are kept, the single men usually lodging with the families of other working men. The customary price for board and lodging, when in the same house, is $4 per week, but if a room is rented without board the cost for the room is from $1.50 to $2.50 per week, and for meals $3.50 per week. For single meals the price is 20 cents.

3 to 10, inclusive. No regular boarding houses are kept for these establishments, single men boarding with the families of other employés. The price for board and lodging ranges from $14 to $18 per month. The cost of washing is from 50 cents to $4 per month.

TENNESSEE.—There are four pig iron furnaces in this state for which the Department has obtained budgets. A large part of the employés are colored, the white employés being mostly skilled laborers. For two of the furnaces the following additional information was obtained as follows:

1. The surroundings are good and there is much prosperity among the employés. In their homes, however, but little attention is given to cleanliness, and both white and black are much the same in this respect.

2. The colored employés appear to do well, and some are saving money.

VIRGINIA.—Budgets were obtained for but one blast furnace in Virginia, and for this other information was obtained as follows:

The prevailing prices for meals and lodging for single men are from $15 to $16 per month for white employés, and $10 per month for colored employés. Board is obtained almost entirely in the families of married men working in the furnace. Many of the single colored men provide their own food and pay $2 per month to have it cooked.

WEST VIRGINIA.—Budgets were obtained from but one furnace in West Virginia, and other information was also obtained as follows:

The average price for meals and room for single employés is $18 per month. The company does not own tenement houses and the employés rent from private parties, so that rents vary considerably.

GREAT BRITAIN.—The Department has obtained budgets for four furnaces in this country, but has other information in regard to only one of them as follows:

Employés of all kinds earn on an average 19*s.* ($4.62) per week, and a family will earn an average of £3 6*s.* ($16.06) per week. The houses are mostly owned by the company. They are built of stone and have good gardens, in which all the vegetables used in a family, except potatoes, are usually raised. The company keeps the fences in repair and whitewashes the outside of the houses at least twice a year. Workmen living in these houses are supplied with coal (one-half ton every two weeks) by the company. The average amount paid per week for fuel and rent is 4*s.* 9*d.* ($1.16), and is stopped out of the wages by the company. Single men can get board and lodging for 8*s.* 6*d.* ($2.07) to 11*s.* ($2.68) per week. It is more common for them to pay from 2*s.* (49 cents) to 3*s.* 6*d.* (85 cents) per week for lodging and attendance; that is, they furnish their own food and the family they hire from prepare their meals. Every employé of the company must pay for the doctor according to earnings, as follows: Earnings 4*s.* (97 cents) per week, or less, nothing; earnings 4*s.* 1*d.* (99 cents) to 12*s.* ($2.92) per week, one penny (2 cents); earnings 12*s.* 1*d.* ($2.94) to 20*s.* ($4.87) per week, 2*d.* (4 cents), and so on; increasing one penny (2 cents) per week for every 8*s.* ($1.95) increase of earnings. This doctor's fee is stopped from the wages by the company. Other stoppages from wages are made with consent of the men, such as payments to benefit societies, etc. In an average family it would seem that of the wages the workmen receive, the sums stopped being deducted, nothing is left after buying food, clothing for the wife and children, and beer for the workman himself. When he needs clothes he gets an advance of £1 ($4.87) from the company. This money is then stopped from his wages at the rate of 5*s.* ($1.22) per week until paid. Some families take boarders to save rent, and in some cases two families will take one of the houses together, one family sleeping nights and working days and the other doing the reverse. In general the company appears to try for the welfare of its employés, but there is much squalor, drunkenness, and immorality among them. Public houses are plentiful and are constantly frequented by men and women and boys and girls. Both married and unmarried women are frequently immoral.

BAR IRON.

ILLINOIS.—In Illinois budgets were secured from the employés of one establishm
The cost of living of unmarried employés is as follows: Meals and lodging, w
in the same house, about $4.50 per week; meals without lodging, $3 to $3.50
week; lodging without meals, $1 to $1.50 per week.

OHIO.—In Ohio budgets were obtained showing cost of living, etc., of employ
nine rolling mills, and information of a general character relating to employ
seven of the same, as follows:

1. The unmarried men pay $18 per month for board and lodging.

2 and 3. The married employés live in houses of from two to five rooms, to w
gardens of from one-fourth to three-fourths of an acre are usually attached
which they pay from $5 to $10 per month. The price of board and lodging for s
men is from $3.50 to $4.50 per week.

4 to 7. The average rate paid for board and lodging by the unmarried emplo
$16 per month.

PENNSYLVANIA.—Budgets were secured from employés in eleven rolling mi
Pennsylvania, from three of which additional information was obtained as foll

1. The single men pay for board and lodging $16 per month, when in the
house. For room without board they pay from $2 to $3.50 per week, and for
without room $3 per week, or 20 cents for single meals.

2. The price of meals and lodging, when taken together, is $4 per week;
without meals $1.50 to $2.50 per week; and meals without room $3.50 per we
20 cents for single meals.

3. The unmarried employés board and lodge with the families of other workn
the mill, at an expense of $2.50 per week, and 50 cents per week for washing.

TENNESSEE.—In the only establishment in Tennessee from which budgets
secured the majority of the employés were colored. The families of many of
employés occupy houses which were built for white people and contain bath
and other conveniences. Many houses are well furnished, giving evidence
thrift and prosperity of their occupants.

WEST VIRGINIA.—The price paid for board and lodging by unmarried em
of the only establishment in West Virginia for which budgets were obtained
per month. The hands in this mill procure houses wherever they can, no tene
being furnished by the company.

FRANCE.—Budgets were obtained from the employés of one establishm
France.

These employés purchase nearly all their provisions from a large cooperativ
and live in houses owned by the establishment, consisting of sixteen rooms o
14 by 16 feet each. These houses are divided into four compartments of four
each of which is occupied by a family, for which a monthly rental of 12½ francs
is paid. This rental includes a vegetable garden of about one-eighth of an acre
cost of board and lodging for unmarried men is from 2 to 3 francs per day ($0
$0.579). A general air of comfort and cleanliness prevails in the houses o
families, and in many cases marked evidences of culture were observed.

STEEL.

WEST VIRGINIA.—The Department has budgets from two establishments in thi
and from one of these it has further information as follows:

The price charged single men for board is $16 per month.

GREAT BRITAIN.—The Department has budgets from nine establishments
country, and from seven of them further information has been obtained as fol

1. For this see the information for Great Britain under the head of pig iron

2 to 6, inclusive. All workmen who earn over £150 ($729.98) per annum are su
an income tax; but very few pay it, in some way managing to shirk it. The

trade protection society among the employés of these establishments. There exists a "board of arbitration and conciliation," and the wages of all iron workers are regulated by the decisions of that board. The houses where the workmen live are built in flats, from one to three flats in height, most of them being two stories high. They are well built, chiefly of stone, though some are of brick, and are comfortable.

A single man pays 15*s*. ($3.65) per week for board and lodging. For breakfast, meat or ham or bacon, with eggs, tea, bread, and oatmeal porridge, is given them. For dinner, they have meat, potatoes, bread, and usually beer or tea. In families the younger children are given oatmeal porridge and milk alone for breakfast. Many of the workmen consume large quantities of drink, the bill of one man at a public house being from 20*s*. ($4.87) to 25*s*. ($6.08) per week.

BITUMINOUS COAL.

ALABAMA.—The Department has budgets for two coal mines in this state, but has further information for one of them only, as follows:

The majority of the miners are white. Single men are largely in the majority. The houses furnished the miners are very poor; most of them mere sheds; none painted or plastered, and but few with ceilings; rough plank inside and out; rain and dust both enter freely. Drinking water is bad; drainage in many sections unknown. There are very few privies and only a few houses fenced in. Several boarding houses, but none kept by company. The most filthy and ignorant are to be found among the foreign element, their surroundings often being worse than those of the negro. The miners earn good wages, but they spend freely, and often the money has all disappeared by sunset of pay day. There is a "commissary" where many spend all they earn. Prices for provisions are about the same as in the city. The miners are generally very wasteful in providing and using food. No free schools. The above information relates to the free laborers, though convict labor is largely employed in these mines.

INDIANA.—The Department has budgets from but one mine in Indiana, from which it has the following further information:

The employés are nearly all natives of this country and in the majority of cases have very comfortable homes. Children well clothed and fed. Carpets in houses, etc. The board of the single men is $3.50 per week. Washing is 75 cents to $1 per month.

OHIO.—The Department has budgets from six mines in this state, and from three of these it has obtained further information, as follows:

1. The miners here are in rather a bad condition. The most of them live in company houses, which are boarded inside. Those living near the mine get their coal by picking it up, while those living away from the mine pay $1.60 a load. Single men pay $12 to $15 per month board. Meals are only $2 to $2.50 per week. Washing is 75 cents to $1 per month.

2. Employés mostly live in log cabins, but in a general way live very comfortably. Although the state law requires companies to pay every two weeks this company pays monthly only, but gives employés the money due them any time they desire it. The company runs a store.

3. The miners here run a successful cooperative store. Articles are sold at wholesale prices plus 3 per cent. on each dollar's worth to pay expenses. There is but one salaried official, the clerk, who is paid $50 per month. There are three directors, who do the buying, but serve for nothing. The miners are mostly English or Welsh. Single men get meals and lodging for $15 to $18 per month. Meals alone for $12 per month. Washing costs from $1 to $1.25 per month.

PENNSYLVANIA.—The Department has budgets from eleven mines in this state, and from six of these it has obtained further information, as follows:

1. Homes of miners are all located in town, where, under local option law, no liquor can be obtained. There is little or no drinking among them. About three-fourths of the employés are married men and about one-half of them own their homes. There is a company's store at which nearly all the employés trade, but no higher prices are

charged than elsewhere. The company has a row of houses for rent, but no occu pies them.

2. Only about one-third of the employés are married men, and a very few ov their houses. The company owns houses in which most of the miners live. are built of rough boards, and no attention to drainage or ventilation was p their construction.

3. About one-third of the employés are married and most of them ow houses. Company runs a store.

4. One-half the employés are married and a few own their homes. Nearly their goods from the company's store.

5. Company owns houses, which are very good ones, plastered and painted and without. Complaint is made of exorbitant charges at the company' There is more beer drinking here than is usual in Pennsylvania.

6. Over half the employés are married and just about half own their Miners are principally Germans.

TENNESSEE.—The Department has budgets for but one mine in this state that has also further information, as follows:

Single men pay for meals and room $16 per month.

GREAT BRITAIN.—For this country the Department has budgets for te companies, but has outside information in regard to one only. For this inf see the statement under the head of Great Britain in the notes on pig iron.

COKE.

ALABAMA.—Budgets were obtained from two establishments in this state one of these certain additional information was furnished, as follows:

The houses occupied by the employés and owned by the company mere sheds. None of them are painted or plastered. There are no free this place. No boarding house kept by the company, but several kept b parties. A commissary store is kept by the company and prices are about as elsewhere. Nearly all the employés are colored, and single men a majority.

TENNESSEE.—Budgets were obtained for one establishment and the follo eral information was also furnished:

The majority of the employés are colored and occupy huts along the mountain. There is no school at the place for colored children, who co grow up in dense ignorance. The company operates the only store in the prices are high.

The prices charged single men for living are as follows:

Meals, per week	
Meals and lodging, per week	
Washing, per fortnight	

WEST VIRGINIA.—Budgets showing income and expenses of families we for one establishment, and the following additional information was furn

The employés have very steady work and work very steadily. The co courages the contracting of debts by their workmen, gives them all the wish to cultivate on the side of the hill, furnishes coal at $1 per mo quires them to place themselves on the doctor's roll, married men pa month, and single men 75 cents. The company also sells lots on the h employés (for building purposes only) at the rate of $3.50 per acre, and men are investing in lots and erecting box shanties thereon.

The prices paid for living expenses by single men are:

Meals and lodging, per month	
Washing, per month	
Doctor, per month	

GREAT BRITAIN.—Budgets were obtained for four establishments, from one of which general information was obtained, for which see Great Britain under the head of pig iron.

IRON ORE.

NEW YORK.—Budgets were obtained from the employés of two iron ore mines. For these the following general information was reported:

1. Most of the employés are single men and foreigners, the following countries contributing the largest numbers: Germany, Hungary, Ireland, and Italy.

2. There are no boarding houses for miners. The families are scattered over the adjoining hills and seem fairly prosperous and happy.

OHIO.—Budgets were obtained for two mines in this state, and for one of these the following additional information was furnished:

The houses let for tenements are mainly one story shanties, with an occasional old farm house which has come into possession of the company. None of the houses are in good repair. The average rate of rent for a tenement of two or three rooms is $3.33 per month. The miners are prevented from working at times on account of water in the mine. The average cost to single men for meals and room is $12 per month.

PENNSYLVANIA.—Budgets were obtained from four mines in this state, from one of which additional information was furnished, for which see No. 1, Pennsylvania, under the head of pig iron.

The "messes" are run at the mines the same as at the furnace, except that the company furnishes houses rent free, with a tenant at will clause. The bill of fare at the mines includes two pounds of meat per man per day, one for dinner and for supper. Each man pays the cook $1.50 per month. The expenses for one month as shown by mess books were:

For food, etc	$6.93
Cook	1.50
Total	8.43

Where employés come into the mines for only a few days and do not join the company or mess they are charged 25 cents a day for food and 5 cents for cooking, or 30 cents per day. Each man has his own bed tick and must get it filled for himself. These remarks apply to the Hungarians, who comprise nearly all the employés of the mine.

VIRGINIA.—Budgets were secured for employés at one mine and the following general information was also furnished:

The company operates a store and the employés are given to understand that their trade is expected, but the prices do not exceed those of any other store in the neighborhood. Some employés buy at other stores. For each day or fraction of a day worked the company issues a ticket which is good for its face value at the company's store in merchandise, but is not transferable. On the 15th of each month the company pays the balance due, after deducting purchases on tickets, in cash.

The prices for living for single men are as follows:

	Per month.
Meals and lodging (whites)	$8 to $12.00
Meals and lodging (colored)	8 to 9.00
Washing	1 to 1.25

Very few single colored men board, generally preferring to buy and cook their own provisions, or to hire the cooking done, in which latter case they pay $1 per month for the service.

LETTER FROM THE WIFE OF A WORKINGMAN.

The following graphic and instructive statement of the econo practised in one household to make both ends meet is worth prin for its suggestiveness of ways and means. It shows how valuab the intelligent administration of a wife determined to get the mos the good of the family out of the husband's earnings, and is undo edly illustrative of what goes on in thousands of families. It wa dressed to an agent of the Department:

DEAR SIR:

In pursuance of the question of living and what it costs, the amount of mon bread winner receives for his labor, and the mincing it takes to make it "su unto the day," I offer you the result of my investigation at home, which I beli be a correct statement of our expenses for one year:

White flour	600 pounds, at	$0.03	per pound ..
Graham flour	150 pounds, at	.03½	per pound ..
"A" sugar	156 pounds, at	.08	per pound ..
Coffee (roasted)	52 pounds, at	.30	per pound ..
Fresh meat	546 pounds, at	.10	per pound ..
Salt meat	156 pounds, at	.12½	per pound ..
Baking powder	12 pounds, at	.50	per pound ..
Tea	6 pounds, at	.75	per pound ..
Beans	60 pounds, at	.06	per pound ..
Butter	104 pounds, at	.20	per pound ..
Lard	100 pounds, at	.10	per pound ..
Salt	60 pounds, at	.01	per pound ..
Pepper	1½ pounds, at	.25	per pound ..
Soap	96 pounds, at	.05	per pound ..
Starch	12 pounds, at	.10	per pound ..
Potatoes	18 bushels, at	1.40	per bushel ..
Onions	3 bushels, at	1.60	per bushel ..
Coal oil	52 gallons, at	.15	per gallon ..
Vinegar	4 gallons, at	.20	per gallon ..
Eggs	24 dozen, at	.15	per dozen...
Yeast	1 dozen packages, at	.05	per package.
Matches	1 dozen boxes, at	.02½	per box.....
Bluing	4 bottles, at	.05	per bottle...
Brooms	4, at	.25	per broom ..

Total grocery account ....

House rent, $7 per month..........

Fuel, $2 per ton..........

Shoes (4 pairs at $3; 6 pairs at $1.50; 6 pairs at $1)..........

Barbering (hair cutting once a month, at 25 cents; shaving once a week, at 10 cents, and twice a week half the time, with an occasional shampoo)

Tobacco (a 5-cent package and 2 cigars a week)..........

Reading (a daily paper at 10 cents a week and a Sunday paper at 5 cents)

Total..........

Wages (average $48 per month) ....

Expenses ....

Surplus..........

Number in family, 7; number of children, 4; ages, 2, 4, 6, and 7 years.

The management that "maintains a six-dollar house on four dollars" will not conform to statistics; hence I must explain that I save four pounds a week of white flour by using graham, and that the flour, lard, baking powder, and sugar on my list are sufficient, if we keep light bread most of the time, and make the pies and cakes few and very far between. I use "A" sugar because there is less shrinkage than in other brands. I make fresh coffee once a day. Butter and eggs are more frequently used as substitutes for meat than otherwise. Crackers, milk, rice, wheat, cheese, pickles, and spices are substitutes for articles of kindred value. All prepared meats, prepared and tropical fruits are bits of extravagance in which we may indulge to the cost of something more indispensable.

The fitness of things must largely control, not the bill of fare alone, but the purchase. In summer and winter alike I must try to buy the food that will sustain us the greatest number of meals at the lowest price, and I should like to shake hands with the person who can reduce it to figures. The cost of pounds, bushels, gallons, etc., on my list are computed at what they actually cost me now. Could I buy in larger quantities I could render a different account. The dividing-up process is the real business of the working man (or his wife). The families are not few who do just as I did a few weeks ago, when I found on Monday morning that I had just $3.35 with which to feed seven of us until Saturday night, and keep the house going. Indeed, some do better figuring than I did, for I, fortunately, had both fuel and flour. At our house meat is the basis, and in an emergency like this we use the coarser meats. So I arranged to have fresh meat once a day. I bought a dime's worth of flank steak twice, at 6½ cents per pound, a soup bone at 10 cents, a 15-cent "boil" at 8 cents per pound, a 15-cent roast at 10 cents per pound, and two pounds of bacon, all of which cost me 85 cents. Then I bought as follows: Sugar, 25 cents; tea, 10; coffee, 30; baking powder, 15; soap, 10; coal oil, 15; cabbage, 10; potatoes, 35; pickles, 10; onions, 10; dried peaches, 15; crackers, 10; beans, 10; eggs, 15; and butter, 20. I have been asked "Why buy pickles and onions when the same amount of money would buy rice and wheat, which surely is cheaper, because so wholesome?" My experience with my children is that rice and wheat require butter or sugar, or both, to make them palatable, and as butter and sugar are luxuries with us we must use them sparingly. With a dime's worth of onions a peck of potatoes will last us a week, at a cost of 45 cents. Without them a half bushel of potatoes are used, at 65 cents, a difference, you see, of enough money to buy beefsteak twice. As for pickles, a dozen at a cost of 10 cents will last us a week, and make salt meat endurable, and they last longer than a peck of apples at 25 or 30 cents a peck. If you wish a demonstration of this fact, just place a peck of apples, no matter how hard and green, where 4 or 5 children have access to them. In addition to all this why and wherewith a visitor adds to the expense $2 per week, and the living is no better than before. This, I think, is due to the disadvantage of buying in small quantities. If I count the cost for a single meal, no more than 5 cents extra for meat, and the same for vegetables (the smallest quantity I could buy), the cost in one week is $2.10. Two visitors a single meal, at different times, cost more than both at the same meal.

Ordinarily our expenses (groceries, fuel, and rent) are from $6 to $7 per week. In the course of a year we have $194.78 with which to buy clothing and household incidentals. Now these "clothing and incidental" items are a host within themselves. Divide $194.78 among seven persons for clothing alone, and we have but $2.32 a month. The "incidentals" are interminable. Stamps, writing material, thread, needles, buttons, pins, lamp flues; in fact everything, from car fare uptown on a rainy day, and a bottle of Castoria for baby, to ammonia and carpet tacks during house cleaning. Could we use a year's earnings as I have divided them we might get through, but bills that were made when the children were sick or the husband out of employment the year previous press heavily sometimes, and cut into the present years' earnings. Or if the factory shuts down without warning, as it did last year for six weeks, we have a growing expense with nothing to counterbalance. An

itemized account of the expenditures of the $194.78, compared with an itemized of what we must and do have on credit I suppose will reveal the frustration efforts. I think sometimes in our efforts to make both ends meet we are kitten I once had who tried with all his little might to catch his tail. twirling round and round and round, always with the end he so much w view, but never quite catching it.

No doubt this "affair" needs boiling down; things I write usually do; man who serves the people with a dish of facts can do that to suit himself.

Yours, socially,

Mrs. J.

H.—RECAPITULATION OF MEANS OF SUPPORT.

[Two other natural combinations suggest themselves as lacking in this table, namely, "Husband and wife" and "Husband and children," but the instances in which wives have contributed in the whole 3,260 families whose budgets are tabulated in this report are, from recollection, considered as hardly 40, so that practically the column of "Husband, wife, and children" consists of "Husband and children."]

State or country.	Total families.	The family supported by earnings of—							
		Husband alone.		Husband, wife, and children.		Husband and other income.		Husband, wife, children, and other income.	
		With a surplus.	With a deficit.	With a surplus.	With a deficit.	With a surplus.	With a deficit.	With a surplus.	With a deficit.

H.—RECAPITULATION OF MEANS OF SUPPORT.

[Two other natural combinations suggest themselves as lacking in this table, namely, "Husband and wife" and "Husband and children," but the instances in which wives have contributed in the whole 3,260 families whose budgets are tabulated in this report are, from recollection, considered as hardly 40, so that practically the column of "Husband, wife, and children" consists of "Husband and children."]

State or country.	Total families.	The family supported by earnings of—							
		Husband alone.		Husband, wife, and children.		Husband and other income.		Husband, wife, children, and other income.	
		With a surplus.	With a deficit.	With a surplus.	With a deficit.	With a surplus.	With a deficit.	With a surplus.	With a deficit.
Alabama	39	17	9	1	1	5	4	1	1

Great Britain	114	4.8	....	11.08	47.03	41.88	99.99	108.17
Total	251	5.2	6	7.97	37.72	34.03	79.45	85.08
Grand total	874	4.9	118	17.56	51.91	53.86	120.76	138.68

H.—RECAPITULATION OF MEANS OF SUPPORT.

[Two other natural combinations suggest themselves as lacking in this table, namely, "Husband and wife" and "Husband and children," but the instances in which wives have contributed in the whole 3,260 families whose budgets are tabulated in this report are, from recollection, considered as hardly 40, so that practically the column of "Husband, wife, and children" consists of "Husband and children."]

State or country.	Total families.	The family supported by earnings of—							
		Husband alone.		Husband, wife, and children.		Husband and other income.		Husband, wife, children, and other income.	
		With a surplus.	With a deficit.	With a surplus.	With a deficit.	With a surplus.	With a deficit.	With a surplus.	With a deficit.
Alabama	39	17	9	1	1	5	4	1	1
Illinois	68	25	18	5	4	9	6	....	1

H.—RECAPITULATION OF MEANS OF SUPPORT.

[Two other natural combinations suggest themselves as lacking in this table, namely, "Husband and wife" and "Husband and children," but the instances in which wives have contributed in the whole 3,260 families whose budgets are tabulated in this report are, from recollection, considered as hardly 40, so that practically the column of "Husband, wife, and children" consists of "Husband and children."]

State or country.	Total families.	The family supported by earnings of—							
		Husband alone.		Husband, wife, and children.		Husband and other income.		Husband, wife, children, and other income.	
		With a surplus.	With a deficit.	With a surplus.	With a deficit.	With a surplus.	With a deficit.	With a surplus.	With a deficit.

H.—RECAPITULATION OF MEANS OF SUPPORT.

[Two other natural combinations suggest themselves as lacking in this table, namely, "Husband and wife" and "Husband and children," but the instances in which wives have contributed in the whole 3,260 families whose budgets are tabulated in this report are, from recollection, considered as hardly 40, so that practically the column of "Husband, wife, and children" consists of "Husband and children."]

State or country.	Total families.	The family supported by earnings of—							
		Husband alone.		Husband, wife, and children.		Husband and other income.		Husband, wife, children, and other income.	
		With a surplus	With a deficit.	With a surplus.	With a deficit.	With a surplus.	With a deficit.	With a surplus.	With a deficit.

Grand total	278	4.9	34	11.43	44.27	38.58	92.50	112.62

H.—RECAPITULATION OF MEANS OF SUPPORT.

[Two other natural combinations suggest themselves as lacking in this table, namely, "Husband and wife" and "Husband and children," but the instances in which wives have contributed in the whole 3,260 families whose budgets are tabulated in this report are, from recollection, considered as hardly 40, so that practically the column of "Husband, wife, and children" consists of "Husband and children."]

State or country.	Total families.	The family supported by earnings of—							
		Husband alone.		Husband, wife, and children.		Husband and other income.		Husband, wife, children, and other income.	
		With a surplus.	With a deficit.	With a surplus.	With a deficit.	With a surplus.	With a deficit.	With a surplus.	With a deficit.

Grand total	184	5.3	56	6.48	34.34	31.59	72.90	74.39

H.—RECAPITULATION OF MEANS OF SUPPORT.

[Two other natural combinations suggest themselves as lacking in this table, namely, "Husband and wife" and "Husband and children," but the instances in which wives have contributed in the whole 3,260 families whose budgets are tabulated in this report, are, from recollection, considered as hardly 40, so that practically the column of "Husband, wife, and children" consists of "Husband and children."]

State or country.	Total families.	The family supported by earnings of—							
		Husband alone.		Husband, wife, and children.		Husband and other income.		Husband, wife, children, and other income.	
		With a surplus.	With a deficit.	With a surplus.	With a deficit.	With a surplus.	With a deficit.	With a surplus.	With a deficit.

H.—SUMMARY OF MEANS OF SUPPORT.

[Two other natural combinations suggest themselves as lacking in this table, i. e., Husband and wife and Husband and children, but the instances in which wives have contributed in the whole 3,260 families whose budgets are tabulated in this report are, from recollection, considered as hardly 40, so that practically the column of Husband, wife, and children consists of Husband and children.]

Nationality of husband.	Total families.	The family supported by earnings of—							
		Husband alone.		Husband, wife, and children.		Husband and other income.		Husband, wife, children, and other income.	
		With a surplus.	With a deficit.	With a surplus.	With a deficit.	With a surplus.	With a deficit.	With a surplus.	With a deficit.

TABLE XXII.—BAR IRON: SUMMARY OF COST OF LIVING FOR ALL STATES COMBINED, BY NATIONALITIES—Concluded.

II.—SUMMARY OF MEANS OF SUPPORT.

[Two other natural combinations suggest themselves as lacking in this table, i. e., Husband and wife and Husband and children, but the instances in which wives have contributed in the whole 3,260 families whose budgets are tabulated in this report are, from recollection, considered as hardly 40, so that practically the column of Husband, wife, and children consists of Husband and children.]

Nationality of husband.	Total families.	The family supported by earnings of— Husband alone. With a surplus.	Husband alone. With a deficit.	Husband, wife, and children. With a surplus.	Husband, wife, and children. With a deficit.	Husband and other income. With a surplus.	Husband and other income. With a deficit.	Husband, wife, children, and other income. With a surplus.	Husband, wife, children, and other income. With a deficit.

H.—SUMMARY OF MEANS OF SUPPORT.

[Two other natural combinations suggest themselves as lacking in this table, i. e., Husband and wife and Husband and children, but the instances in which wives have contributed in the whole 2,200 families whose budgets are tabulated in this report are, from recollection, considered as hardly 40, so that practically the column of Husband, wife, and children consists of Husband and children.]

Nationality of husband.	Total families.	The family supported by earnings of—							
		Husband alone.		Husband, wife, and children.		Husband and other income.		Husband, wife, children, and other sources.	
		With a surplus	With a deficit.	With a surplus.	With a deficit.	With a surplus.	With a deficit.	With a surplus.	With a deficit.

TABLE XXII.—BITUMINOUS COAL: SUMMARY OF COST OF LIVING FOR ALL STATES COMBINED, BY NATIONALITIES—Concluded.

II.—SUMMARY OF MEANS OF SUPPORT.

[Two other natural combinations suggest themselves as lacking in this table, *i. e.*, Husband and wife and Husband and children, but the instances in which wives have contributed in the whole 3,260 families whose budgets are tabulated in this report are, from recollection, considered as hardly 40, so that practically the column of Husband, wife, and children consists of Husband and children.]

Nationality of husband.	Total families.	The family supported by earnings of— Husband alone. With a surplus.	Husband alone. With a deficit.	Husband, wife, and children. With a surplus.	Husband, wife, and children. With a deficit.	Husband and other income. With a surplus.	Husband and other income. With a deficit.	Husband, wife, children, and other income. With a surplus.	Husband, wife, children, and other income. With a deficit.

H.—SUMMARY OF MEANS OF SUPPORT.

[Two other natural combinations suggest themselves as lacking in this table, i. e., Husband and wife and Husband and children, but the instances in which wives have contributed in the whole 2,250 families whose budgets are tabulated in this report are, from recollection, considered as hardly 40, so that practically the column of Husband, wife, and children consists of Husband and children.]

Nationality of husband.	Total families.	The family supported by earnings of—							
		Husband alone.		Husband, wife, and children.		Husband and other income.		Husband, wife, children, and other income.	
		With a surplus.	With a deficit.	With a surplus.	With a deficit.	With a surplus.	With a deficit.	With a surplus.	With a deficit.

H.—SUMMARY OF MEANS OF SUPPORT.

[Two other natural combinations suggest themselves as lacking in this table, i. e., Husband and wife and Husband and children, but the instances in which wives have contributed in the whole 3,260 families whose budgets are tabulated in this report are, from recollection, considered as hardly 40, so that practically the column of Husband, wife, and children consists of Husband and children.]

Nationality of husband.	Total families.	The family supported by earnings of—							
		Husband alone.		Husband, wife, and children.		Husband and other income.		Husband, wife, children, and other income.	
		With a surplus.	With a deficit.	With a surplus.	With a deficit.	With a surplus.	With a deficit.	With a surplus.	With a deficit.

H.—RECAPITULATION OF MEANS OF SUPPORT.

[Two other natural combinations suggest themselves as lacking in this table, namely, "Husband and wife," and "Husband and children," but the instances in which wives have contributed in the whole 3,260 families whose budgets are tabulated in this report are, from recollection, considered as hardly 40, so that practically the column of "Husband, wife, and children" consists of "Husband and children."]

Industry.	Total families.	The family supported by earnings of—							
		Husband alone.		Husband, wife, and children.		Husband and other income.		Husband, wife, children, and other income.	
		With a surplus.	With a deficit.	With a surplus.	With a deficit.	With a surplus.	With a deficit.	With a surplus.	With a deficit.
United States.

TABLE XXIV.—SUMMARY OF COST OF LIVING FOR ALL INDUSTRIES COMBINED, BY NATIONALITIES—Concluded.

II.—SUMMARY OF MEANS OF SUPPORT.

[Two other natural combinations suggest themselves as lacking in this table, namely, "Husband and wife" and "Husband and children," but the instances in which wives have contributed in the whole 3,260 families whose budgets are tabulated in this report are, from recollection, considered as hardly 40, so that practically the column of "Husband, wife, and children" consists of "Husband and children."]

Nationality of husband.	Total fam- ilies.	The family supported by earnings of—							
		Husband alone.		Husband, wife, and children.		Husband and other income.		Husband, wife, children, and other income.	
		With a surplus.	With a deficit.	With a surplus.	With a deficit.	With a surplus.	With a deficit.	With a surplus.	With a deficit.
